

# Improving Preclinical to Clinical Translation in Alzheimer's Disease: The MODEL-AD Preclinical Testing Pipeline

**Paul R Territo, PhD**

Head, MODEL-AD Preclinical Testing core  
Indiana University School of Medicine

**Stacey J Sukoff Rizzo, PhD**

Co-Head, MODEL-AD Preclinical Testing core  
University of Pittsburgh School of Medicine

# Recommendations from 2015 NIA AD Summit

Increasing the Predictive Value of AD Animal Models and Enabling Transparent and Reproducible Preclinical Efficacy Testing

- Establish and implement guidelines for rigorous preclinical testing in LOAD models with the **standards/rigor comparable to clinical trials in humans**
- **Provide a resource/facility** for standardized therapeutic efficacy testing of preclinical drug candidates that **prioritizes translational biochemical and physiological endpoints (e.g. PET/MR) over behavioral measures** using best practices
- Develop a database of preclinical studies that would be available to the AD scientific community and **incorporating experimental details as well as unpublished negative and positive data**

NIA Funding Initiative  
**RFA AG16-04**

## **MODEL-AD Consortium**

**Model Organism Development and Evaluation**  
for **Late-onset Alzheimer's Disease**  
**U54 AG054345 (IU/JAX),**  
**U54 AG054349 (UCI)**

Expand animal model resources for basic research and preclinical testing of candidate therapeutics with 50 new mouse models of AD

MODEL-AD  
Model Organism Development &  
Evaluation for Late-Onset  
Alzheimer's Disease

# Disease/Drug/Biomarker Optimization

	$\cap$	Disease	Drugs
A		-	-
B		-	+
C		+	-
D		+	+

- The **Disease  $\cap$  Drug  $\cap$  Biomarkers (D)**
- An MOA relevant and translatable biomarker is available
- PET Biomarkers provide clinically relevant information on disease endpoints
- PET Biomarkers provide rapid clinical translation based on current clinical use
- Secondary confirmation via AutoRad ensures reliability of PET Biomarkers at higher resolution
- Tertiary confirmation via Immunopathology ensures target engagement independent of PET or AutoRad

Intersection of the disease, drug mechanism of action, and biomarker properties yields region (A-C) represents potential false negative (-) or positive (+) readouts. Region D provides the optimal measure of drugs action on a disease process.

# Drug Selection Ranking Algorithm

$$W(j) = \frac{1}{m} \sum_{i=1}^n \alpha(i) \beta(i, j) \gamma(i, j)$$

$$\alpha = \begin{cases} 0, & \text{if } \gamma = \text{None} \\ 1, & \text{if } \gamma > \text{None} \end{cases}$$

$$\beta \rightarrow [0.0, 1.0]$$

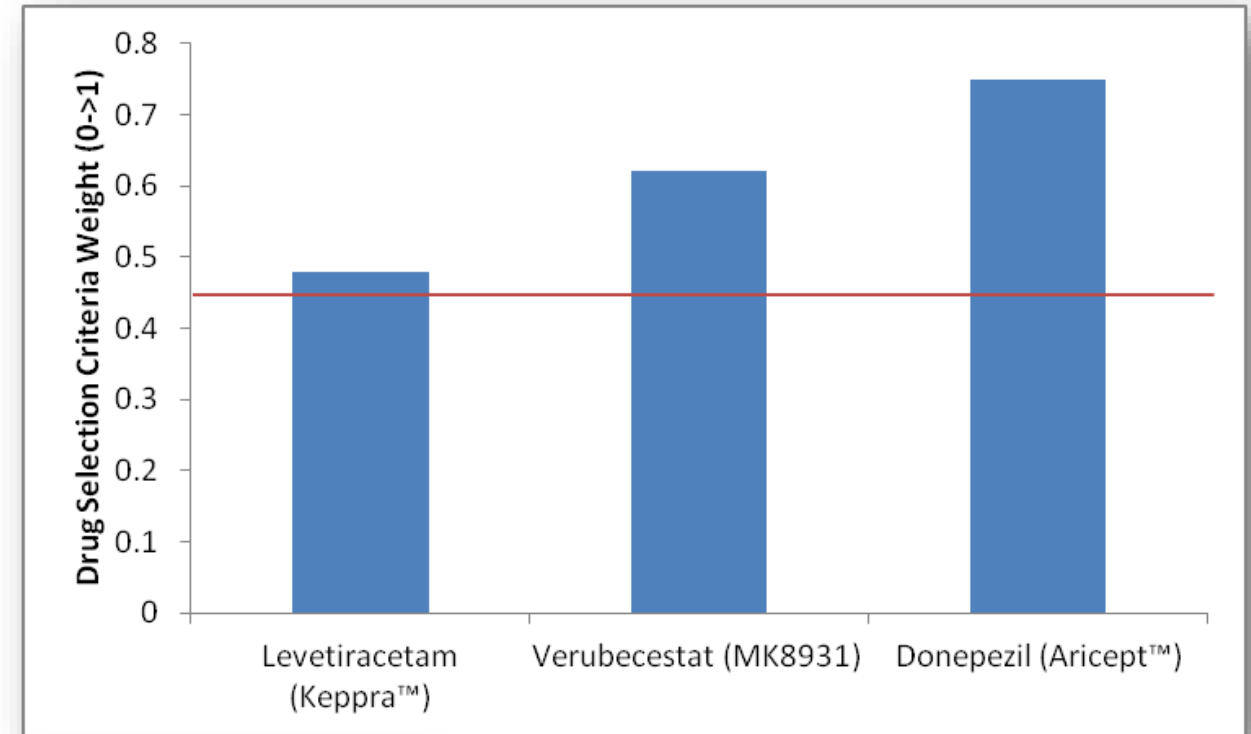

$$\gamma = \{\text{none}, \text{poor}, \text{fair}, \text{good}, \text{excellent}\}$$

$$\gamma: b \rightarrow [0, 1] \text{ as a sigmoid function}$$

- Candidates will be rank order will be based on a cumulative weighting scheme
  - Biophysical Characteristics
    - *In vitro* and *In vivo*
  - Pharmacokinetics Data
    - *In silico*, *In vitro*, and *In vivo*
  - Toxicology Data
    - LD50
    - Acute
    - Chronic
    - Teratogenicity
  - Clinical Data

# Drug Selection Ranking Algorithm - Analysis

- Donepezil (Aricept™)
  - Cholinesterase Inhibitors
  - 1 of 2 FDA approved medications for AD
  - Symptomatic Modifying Drug (SMOD)
- Levetiracetam (Keppra™)
  - Synaptic vesicle protein modulator SV2A
  - Atypical anti-convulsant medication
  - Disease Modifying Drug (DMOD) at 1/15<sup>th</sup> the anticonvulsant dose
- Verubecestat (MK8931)
  - Beta secretase 1/2 (BACE1/2) inhibitor
  - Phase 2/3 FDA EPOCH (suspended) APECS (ongoing)
  - Disease Modifying Drug (DMOD)

0.80-1.00	Excellent
0.71-0.80	Good
0.45-0.70	Moderate
0.35-0.44	Fair
0.00-0.34	Poor

## Welcome to the STOP-AD Compound Submission Portal

Screening the Optimal Pharmaceutical for Alzheimer's Disease (STOP-AD) is a program that offers preclinical screening of compounds through the MODEL-AD Preclinical Testing Core.

### APPLY FOR COMPOUND TESTING WITH THE MODEL-AD PRECLINICAL TESTING CORE

The Preclinical Testing Core (PTC) of the Model Organism Development for Late Onset Alzheimer's disease (MODEL-AD) consortium supports preclinical screening of test compounds nominated by the greater research community. The PTC has established a streamlined preclinical drug testing strategy with go/no-go decision points that allow critical and unbiased assessments of potential therapeutic agents.

The PTC is accepting nominations for preclinical screening of test compounds in mouse models of late onset Alzheimer's disease developed and validated by the disease-modeling project (DMP) of the MODEL-AD.

Compounds submitted for testing initiated via an application process through this web portal may be selected for evaluation through a preclinical testing pipeline funded by The National Institute on Aging U54 AG054345 and executed by the MODEL-AD PTC.

Submissions will be reviewed by a Steering Committee that evaluates and prioritizes nominations based on optimal drug-like properties and available experimental data that support the likelihood of success as a potential therapeutic for the treatment of Alzheimer's disease. Compounds selected for screening will be conducted within the PTC labs at Indiana University and the University of Pittsburgh.

Model Organism Development & Evaluation for Late-Onset Alzheimer's Disease

# PTC: Building a Preclinical Testing Pipeline

- Mouse models will be best **matched** to the compound of interest being evaluated in the screening pipeline based on **both disease pathology** and **compound mechanism of action**.

Mouse Model	Pathological Hallmark	Drug (Mechanism)	Primary Fluid Biomarker	Primary Biomarker	Secondary Biomarker	Primary Confirmation	Secondary Confirmation
5XFAD	Abeta	BACE Inhibitor (Verubecestat)	CSF/plasma AB40 AB42	PET/MRI AV45	PET/MRI FDG	AutoRad AV45 FDG	IHC Abeta
hTau	Tau	Tau Inhibitor	pTau	AV1451	PTSM	AV4151 PTSM	Tau
IL1RAP	Neuro-Inflammation	Anti-Inflammatory	Cytokines	PTSM	FDG	PTSM FDG	IBA1 GFAP

# PTC: Building a Preclinical Testing Pipeline

## Pipeline Characteristics

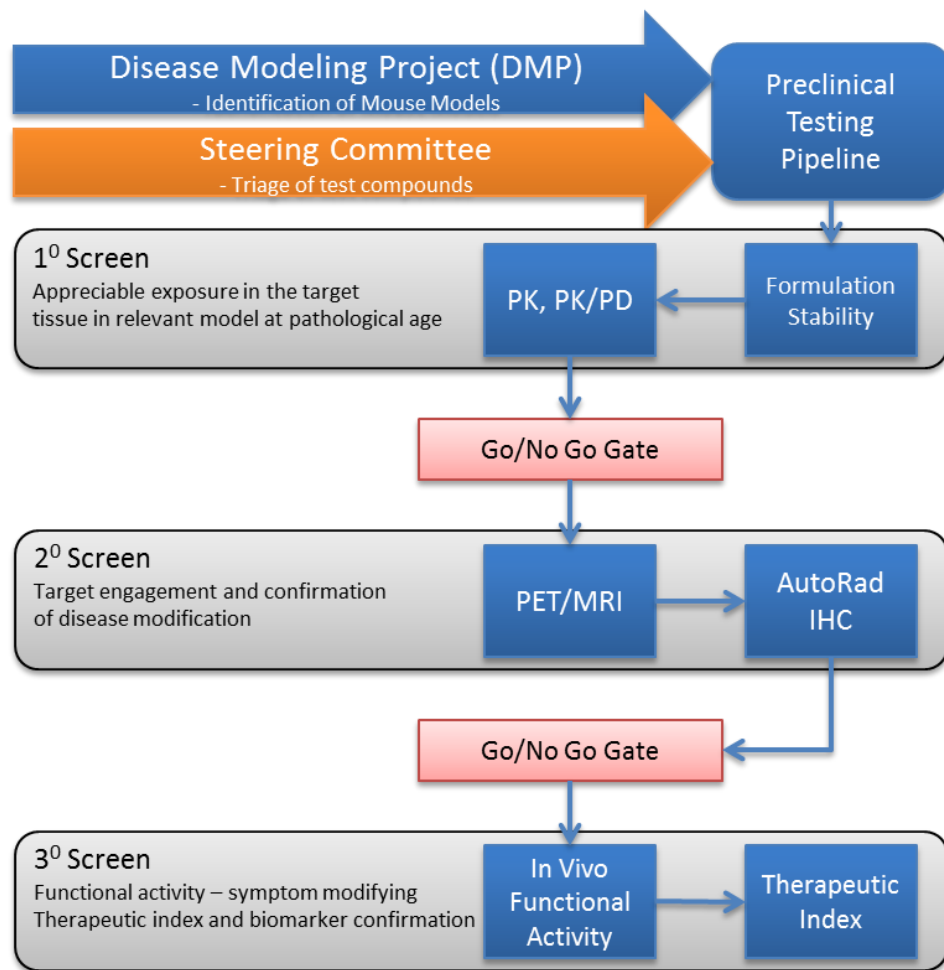

- 1-2 compounds per year (currently)
- Initial pipeline validation with well known model (5xFAD) and known compounds

## ARRIVE Guidelines and Best Practices

- Drug QC & formulation stability
- N=10-12 per sex per dose
- Age-matched vehicle controls
- Blinded technicians
- Blinded data analysis
- Subjects randomized and counterbalanced for order of testing
- Raw data and SOPs to Sage/Synapse

# PTC: Building a Preclinical Testing Pipeline

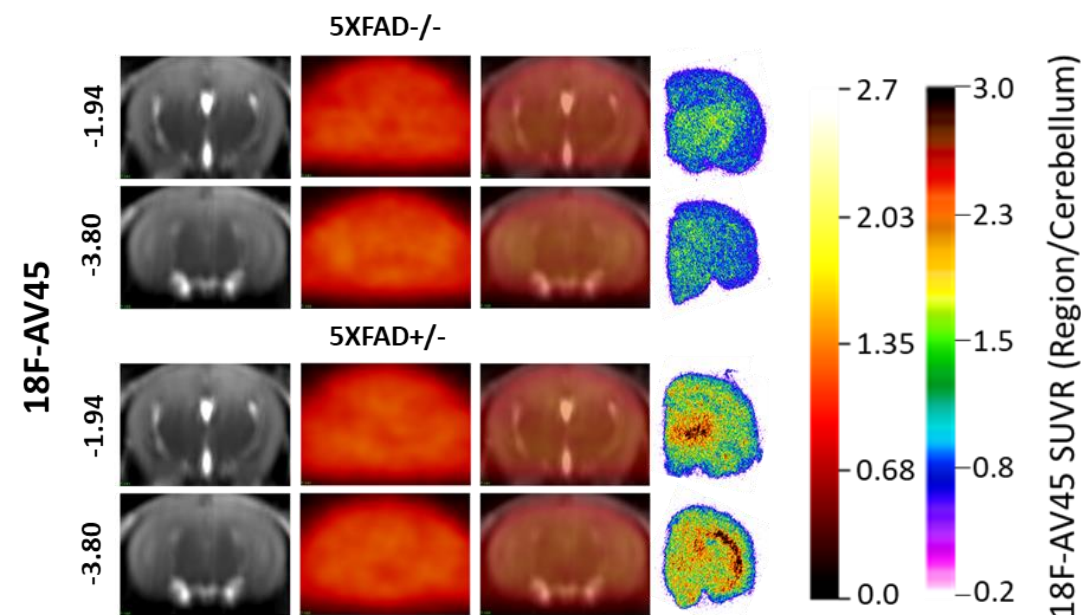

PTC = Preclinical Testing Core

# PTC: Building a Preclinical Testing Pipeline

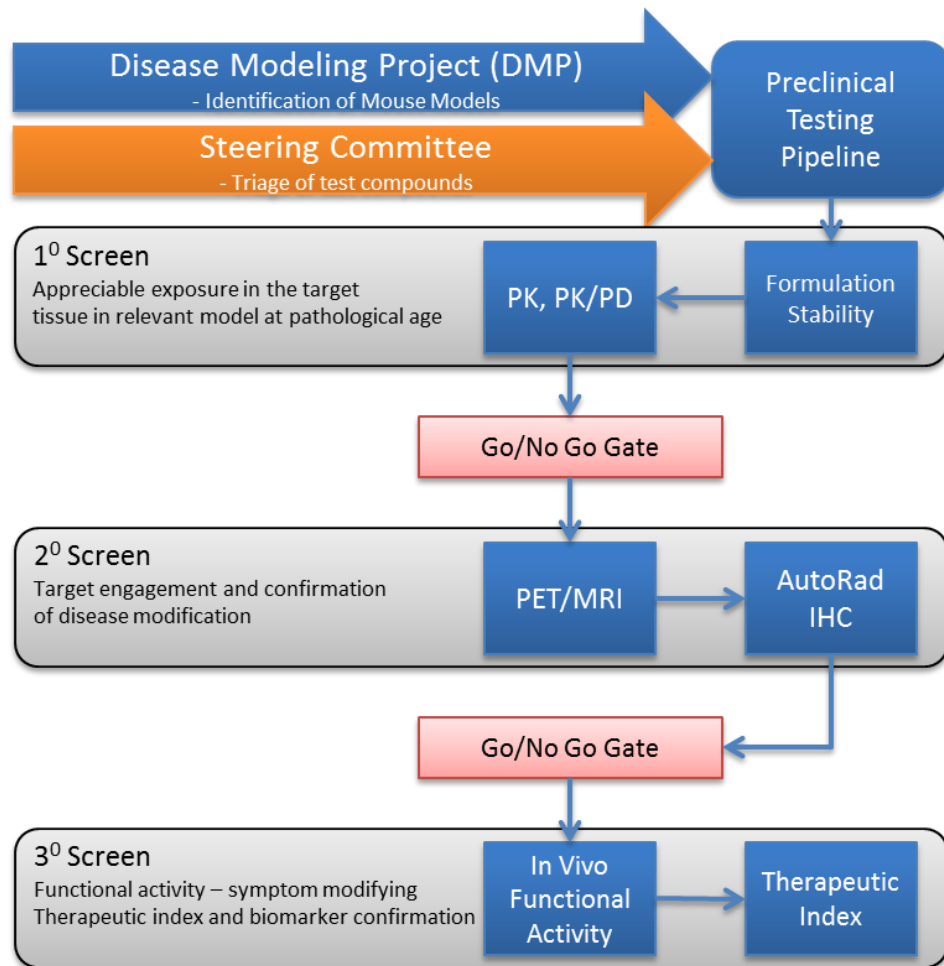

## PET/MRI/AutoRad as a PD biomarker of:

- Glucose Metabolism (18F-FDG)
- Tissue Perfusion (64Cu-PTSM)
- Beta Amyloid Deposition (18F-AV45)
- Tau (3R/4R) Deposition (18F-AV1451)

# PTC: Building a Preclinical Testing Pipeline

## Effects of Test Compound on:

- Hippocampal working memory deficits
- Locomotor Activity
- Motor Coordination

PTC = Preclinical Testing Core

# MODEL-AD PTC Educational & Training Resources

## • Lecture Topics

- Drug Discovery and Development Process
- Pharmacokinetics and Bioanalytical
- Pharmacodynamics and PD endpoints for AD
- PK/PD Modeling
- Behavioral Phenotyping & Pharmacology for AD mouse models
- Translational Pharmacology (PET/MR)
- Intersection of Clinical and Preclinical Genetics
- MODEL-AD Consortium Resources and new AD mouse model Resources
- Preclinical Biostatistics
- Genetic Diversity
- Featured Lecture: Ron Demattos, PhD – Eli Lilly, MODEL-AD EAB member
- Town Hall Discussions

## • Hands On Training & Practicums

- *in vivo* PK studies
- drug formulation
- routes of administration (PO, IP, SC, etc.)
- serial blood sample and terminal CSF and tissue collections
- Executing experiments in line with ARRIVE guidelines
  - Blinding
  - Randomization
  - Counterbalancing
  - Controls
  - Sample size Analyses
- Lunch & Learn Sessions: nanoString, Tissue Vision, CLIMB
